Engineering in Computer science and engineering (CSE)

SKILLS

DBMS, Docker, CPP, Android, ML, Js, PHP, Unity gaming development,
C, Python, Java, HTML, CSS.
Other: financial analytics (stata software)

PROJECTS

College institute database + virtualization

In this project, created database with SQL and connected it with the php web layout. And used this database with apache server. In this project there is two login systems, in one student can login and view their profile, in other one teacher can login and they can manage student's grade. They can view students order based on progress of their respective subjects. The response of teachers in students' grade will reflect to students' profile, in their results. And finally, I dockerize all with docker compose so anyone can use it on their system.

DBMS for IPL

Its made from SQL for to manage all players of IPL match for IPL website, Managing player is like, there will be players with its stats (like score, sixes, fours, fifty, century, total runs etc.) total matches played and all!

Online shopping delivery system database.

This project is similar as ekart database system.

And I made some games in unity like fight for alive and space shooter, and I made text prediction app from Wikipedia text corpus using ML(recurrent neural networks).
